

CERVICO 2000™

3D Mobile Spinal Decompression

Cervico 2000™ is an ambulatory decompression device for the treatment of acute and chronic neck pain. Easily tailored to the specific needs of each patient, Cervico 2000™ is one of the few devices that enables both symmetric and asymmetric traction to the cervical spine and the **only** device that uses 3 dimensional traction. Cervico 2000™ goes beyond pain relief to targeting the actual cause of the pain by actively promoting the healing of such disorders and injuries as herniated discs, torticollis and whiplash. During treatment, patients are completely mobile and encouraged to perform light activities and exercise for active rehabilitation.

Why Meditrac?

Meditrac is a leader in the development, testing and manufacturing of innovative medical devices for the ambulatory non-surgical treatment of spinal disorders. The "Traction on the Move" concept, developed by a team of orthopedic surgeons, combines the benefits of traction therapy with freedom of movement for rapid relief and a sense of well-being.

Why Cervico2000?

- A cervical treatment solution that increases patient compliance and satisfaction.
- One size fits All.
- Safe and effective treatment
- Vertical, horizontal, symmetrical and asymmetrical traction forces.
- Complete freedom of movement.
- Only 15-20 minutes per treatment session.
- Compact, portable and easy to use!
- Reimbursable by insurance.

Customizable

Costeffective

Compact & user friendly

Complete freedom of movement

Asymmetric traction

Symmetric Traction

CERVICO 2000™

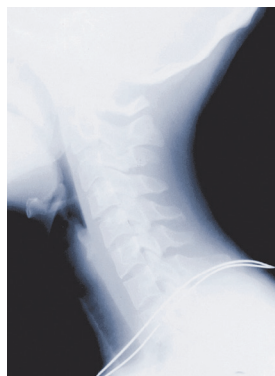

Traction on the Move By Meditrac

Results that Count!

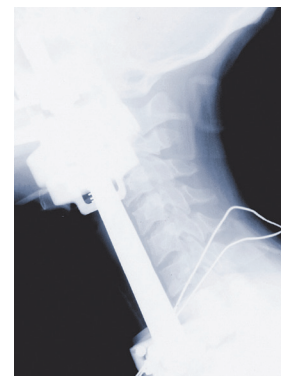

Traction decreases intra-discal pressure on the nerve root and dural sac. Disc disorders are accompanied by muscle spasm and reduced transfer of fluid. Due to the disc's unique structure, stationary body positioning causes reduction in fluid exchange and accelerates disc degeneration. Research shows that transfer of fluid is essential for the normal biomechanics of the disc and is possible when the spine is in motion. The "Traction on the Move" concept is based on combining motion with traction which simultaneously decreases pressure, enables fluid exchange, improves Range of Motion (ROM) and promotes recovery. Cervico 2000 enables application of distraction force directly to the cervical spine alongside the cervical lordosis while retaining patient mobility. The device is reimbursable for clinic use and can be utilized in homecare as well with no need for drugs or hospitalizations.

X-Ray Results with Cervico 2000™ widens intervertebral space and releases compression

Before Treatment

The cervical spine before treatment shows hyperlordosis with nerve compression in the intervertebral foramen.

During Treatment

The cervical spine during Cervico 2000™ treatment exhibits hyperflexion. The intervertebral foramen is open, there is no nerve compression and the intervertebral space is widened.

Indications for use:

- Discogenic neck pain.
- Cervical Spondylosis.
- Whiplash injury.
- Degenerative disc disease.
- Nerve root compression.
- Radiculopathy.

Warning & Precautions

- According to the FDA in the USA the sale of this device is restricted to individuals by or on the order of a physician only.
- The instructions provided by your health care provider should be followed precisely.
- Do not exceed the recommendations of your health care provider.
- The Cervico carries the CE mark.
